

Abdominal Aortic Aneurysm

The aorta is the largest artery in the body. It arises from the heart at the aortic valve as the ascending aorta. The ascending aorta then turns, forming an arch, and descends through the diaphragm into the abdomen. After passing through the diaphragm, it is called the abdominal aorta.

Disease in the descending and abdominal aorta is much more common than in the ascending aorta and will be due to atherosclerosis with the associated risk of Coronary Artery Disease (CAD). Atherosclerosis is vascular disease due to lipid and calcium deposition in arterial walls; the layman’s term is “hardening of the arteries”. The disease leads to narrowing (stenosis) or dilation (aneurysms) or tearing (dissection) between the layers of the arterial wall.

Ultrasound and CT scanning are excellent ways to measure aortic aneurysms and dissections. Due to the high mortality of ruptured aortic aneurysms, surgery is done when the aneurysm is 5-6 cm. in size.

Underwriting consideration:

Atherosclerotic disease of the aorta

No aneurysm, no claudication or symptoms	Non-rated-Table B
Aneurysm, 4.5 cm or less, stable for at least two year	Table F-H
Aneurysm, over 4.5 cm or stable less than two years	Decline
Operated, full recovery	Table C

Aortic disease (aneurysm, dissection, etc.) due to connective tissue disease (such as vasculitis, arteritis, Marfan syndrome and others) or syphilis would be declined if present; after surgical repair individual consideration is possible.

To get an idea of how a client with Abdominal Aortic Aneurysm would be viewed in the underwriting process, feel free to use the Ask “Rx” pert underwriter on the next page for an informal quote.

Abdominal Aortic Aneurysm - Ask "Rx" pert underwriter (ask our experts)

Producer _____ Phone _____ Fax _____

Client _____ Age/DOB _____ Sex _____

If your client has a history of Abdominal Aortic Aneurysm, please answer the following:

1. Please list date of initial diagnosis: _____

2. Has your client had any of the following tests or treatment?

(if yes, please note dates and size if appropriate)

ultrasound _____ (date) _____ (size)

CAT Scan _____ (date) _____ (size)

surgery _____ (date)

3. Has the aneurysm been stable in size for 2 or more years? Is your client on any medications?

yes, please give details _____

no

4. Are any of the following present (check all that apply)?

pain in the legs with walking elevated cholesterol

hypertension diabetes

coronary artery disease cerebrovascular disease

5. Is your client on any medications?

yes, please give details _____

no

6. Has your client smoked cigarettes in the last 12 months?

yes, please give details _____

no

7. Does your client have any other major health problems (ex: cancer, etc.)?

yes, please give details _____

no

After reading the Rx for Success on Abdominal Aortic Aneurysm, please feel free to use this Ask "Rx" pert underwriter for an informal quote.
